

Lunar Explorations:

1. Between craters Walther and Gauricus

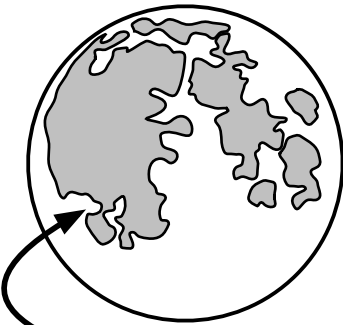

Best seen: April 11 & 12; April 23, 2022.

1671. Several times, Giovanni Domenico Cassini thought he saw a misty formation, perhaps a cloud.

Lunar Explorations:

2. Gassendi

Best seen: April 13 & 14; and April 25, 2022.

1776. English astronomer William Herschel imagined that the shading variations on the crater floor were caused by the changing shadows of a vast forest of trees that were several times taller than those on Earth.
