

Lunar Explorations:

11. Linné

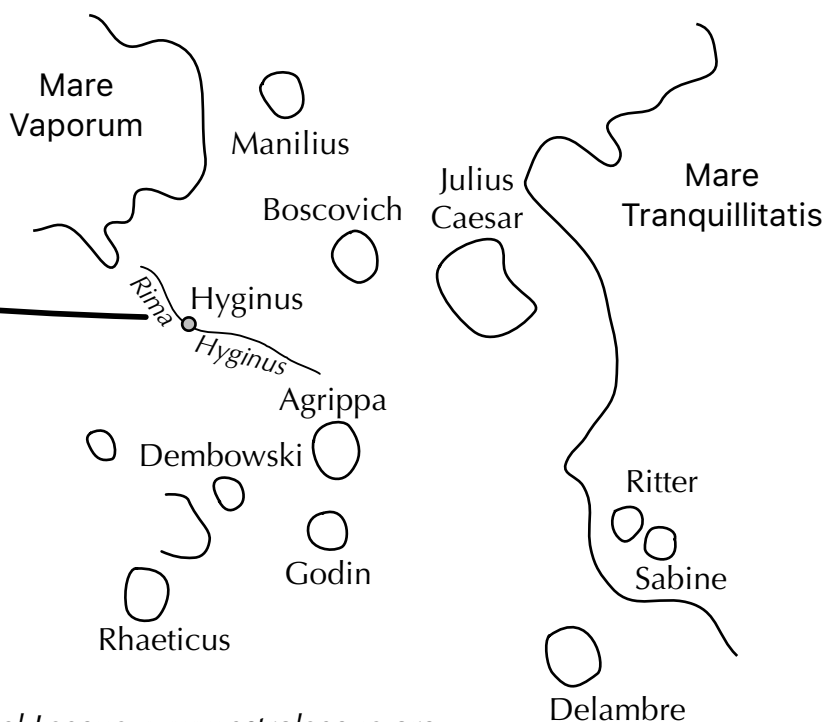

Best seen: April 10 & 11 (morning); April 27 (evening), 2023.

1866. Johann Frederich Julius Schmidt, followed by others, thought that the small crater Linné had been damaged or transformed by unknown agents.

Lunar Explorations:

12. Hyginus N

Best seen: April 10 (morning); April 27 (evening), 2023.

1877. Hermann Klein, Director of the Cologne Observatory, found a dark patch near Hyginus crater, one that hadn't been visible in earlier observations.
